ABSTRACT

An antenna module is provided. The antenna module is adapted to transmit a wireless signal. The antenna module includes a first dielectric layer, a ground layer, a first radiator, a feed conductor, a second dielectric layer, a second radiator and a third dielectric layer. The first dielectric layer includes a first surface and a second surface. The ground layer is disposed on the first surface. The first radiator is disposed on the second surface. The feed conductor is coupled to the first radiator. The second dielectric layer includes a third surface and a fourth surface, wherein the second dielectric layer covers the first radiator, and the third surface contacts the first radiator and the second surface. The second radiator is disposed on the fourth surface. The third dielectric layer is disposed on the fourth surface and covers the second radiator.
